

Exercise 1 Consider

- The vector $\vec{\mathbf{v}}$ whose tip is at the point $(1, -2, 4)$ and whose tail is at the point $(-2, 1, 3)$.
- The vector $\vec{\mathbf{w}}$ whose tip is at the point $(3, 3, -1)$ and whose tail is at the point $(-2, 3, 4)$.

Compute $\vec{\mathbf{v}} + \vec{\mathbf{w}}$.

$$\vec{\mathbf{v}} + \vec{\mathbf{w}} = \langle \boxed{8}, \boxed{-3}, \boxed{-4} \rangle$$
