Moving Conductors

Electromagnetics

Static electric fields are independent from static magnetic fields. In dynamic electromagnetic fields changing electric field induces changing electric field and so on.

Induced EMF

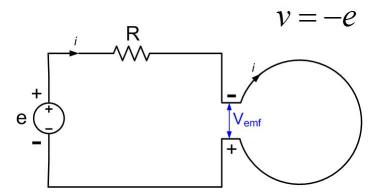

Figure 1: Induced voltage due to a loop of wire with AC current. Voltage induced is due to inductance of the loop of wire.

Motional EMF

Learning outcomes: Magnetostatic fields. Author(s): Milica Markovic

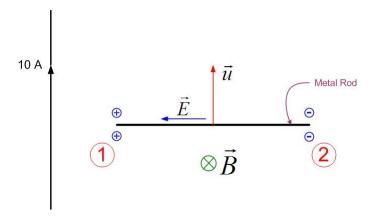

Figure 2: Example of induced motional electromotive force.
